

LEVERAGE

INFORMATION SYSTEMS

formerly COMMUNICATION SPECIALISTS
and FEDERAL NETWORK SERVICES

Capabilities Statement

The Leverage Information Security (INFOSEC) Services practice provides comprehensive, in-depth security offerings for Information Technology (IT) systems. INFOSEC Services has security service offerings that support the management, operational, and technical safeguards that protect the confidentiality, integrity, and availability of an information system and its data. The practice may start by conducting reviews and audits of IT systems and networks or of business workflow practices to determine their security functionality and capabilities or by simply augmenting capability or receiving specific tasking. Leverage is proud to offer the following services:

1. INFOSEC Specialists identify security concerns through various types of analysis
 - ♦ Risk Analysis
 - ♦ Vulnerability Analysis
 - ♦ Strengths, Weaknesses, Opportunities and Threats Analysis
 - ♦ Business Process Analysis
2. Develops plans, projects, and programs to alleviate concerns based on business workflow.
3. Conducts Business Process Analysis, Re-Engineering, and Management efforts to ensure continuity of business practices, secure operations, proper documentation for process certifications, and responsiveness to business requirements.
4. Develops policies and procedures for security and business process related issues.
5. Tracks progress towards meeting INFOSEC goals using government and best-practice standards as well as any specific organizational reporting standards.
6. Manages all types of disaster recovery planning, and produces incident response guides, contingency plans, and continuity of operations plans.
7. Conducts site surveys and audits for security and business processes to determine customer requirements (compliance based) and needs.
8. Facilitates and manages the certification and accreditation (also known as Security Test and Evaluation) of IT systems.
9. Accumulates information to ensure proper solutions management, which includes root cause analysis to validate that the correct problems rather than symptoms are corrected.
10. Audits knowledge management functionality and develops knowledge maps, lessons learned, and knowledge management plans to protect intellectual property assets.
11. Conducts awareness training and independent training related to the full breadth of INFOSEC and authorized to realize national or international certifications.
12. Provides other security consulting services as requested.
